

Task 1: Product List Rendering

Objective

To display multiple records using list rendering.

Components

Model: Product (id, name, price)

Controller: Sends List<Product>

View: Iterates and displays list

Flow

Request → /products

Controller prepares list

Adds list to model

View uses loop to render

Expected Output

Product List

1 Laptop 50000

2 Mobile 20000

3 Tablet 15000

Task 2: Date & Time Rendering

Objective

Display current system date and time.

Components

Use LocalDateTime

Flow

Controller → Model → View

Expected Output

Current Date: 05-05-2026

Time: 10:30 AM

Task 3: Weather Report Display System

Problem Statement

Design a Spring Boot MVC application to display a daily weather report for a city. The data is already available in the backend and must be rendered on the UI.

Given Data (Predefined in Controller)

City: Hyderabad

Temperature: 32°C

Condition: Sunny

Humidity: 60%

Requirements

Create a Weather model class with required fields

Controller should:

Create a Weather object

Add it to the Model

Create a view page to display all weather details

Expected UI Output
----- Weather Report -----
City : Hyderabad
Temperature : 32°C
Condition : Sunny
Humidity : 60%

Task 4: Mobile List Display

Problem Statement

Develop an MVC application to display a list of mobile phones.

Given Data
Samsung - Galaxy S21 - 50000
Apple - iPhone 13 - 70000
OnePlus - 9 Pro - 60000

Requirements
Create a Mobile model class
Controller should:
Create a list of mobile objects
Add it to Model
View should:
Iterate list and display all mobiles

Expected UI Output
----- Mobile List -----
Samsung Galaxy S21 50000
Apple iPhone 13 70000
OnePlus 9 Pro 60000
🎯 Learning Focus
List rendering
Loop usage in View
